

## COLOR MATCHING

### Blending:

- Blending color creates an “illusion” that minimizes a color, texture, or metallic flop mismatch.
- The Rule of thumb is:  
*ALWAYS BE PREPARED TO BLEND!*
- PPG recommendation: *Prepare* to blend all repairs. Blending is the most effective color matching tool in the painter’s arsenal.
- It is *far easier* to prepare adjacent panels for a blend at the beginning of the repair process than *in the middle* of the repair.

### BLENDING: PANEL REPAIR

1. Color entire door

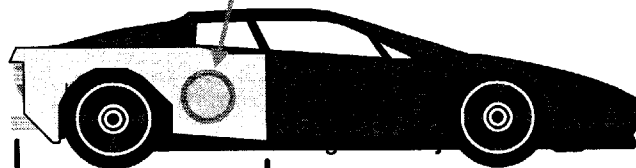

2. Extend color edge to adjacent panels

3. Clearcoat entire side

### BLENDING: SPOT REPAIR

1. Apply color to spot

2. Clearcoat entire panel
